Panda Mart Sales & Operations Insight Hub

Panda Mart is a nationwide retail chain operating across multiple store locations and departments. As the business grows, leadership needs a unified view of sales performance, profitability, and operational efficiency. Although Panda Mart collects large volumes of transactional and store-level data, the information is fragmented, making it difficult to evaluate performance consistently across regions and store types.

To support strategic decision-making, Panda Mart requires a consolidated BI solution that brings together sales insights, cost analysis, and target tracking in a single, interactive environment.

Problems Identified

The dashboards address several real business challenges Panda Mart faces:

- Inconsistent visibility into sales performance across store locations, store types, and departments.
- Difficulty comparing year-to-date vs. total sales, limiting the ability to track growth and seasonality.
- Limited insight into gross profit contribution, making it hard to identify high-value vs. low-value areas.
- No clear view of progress toward sales targets, preventing early intervention when stores fall behind.
- Operational costs such as wages and rent are not analyzed alongside sales, making it difficult to assess efficiency.
- Unclear relationships between store characteristics (size, rent) and performance, limiting strategic planning for expansion or restructuring.

These gaps prevent Panda Mart from optimizing store operations, improving profitability, and making data-driven decisions.

Solutions Delivered

The two dashboards directly solve these problems by providing a structured analytical view of Panda Mart's performance.

🟦 Sales Overview Report

This dashboard consolidates all sales-related metrics into a single view, enabling leadership to understand:

- Total Sales and Sales YTD across the entire business
- Gross Profit performance and contribution by store and department
- Sales distribution across the U.S., highlighting regional strengths and weaknesses
- Store type performance, showing which formats drive the most revenue
- Department-level insights, helping identify high-performing and underperforming product categories

This solution gives Panda Mart a clear, comparative understanding of where revenue is generated and which areas require strategic focus.

🟩 Retail Cost & Target Assessment

This dashboard focuses on operational efficiency and target tracking, enabling Panda Mart to:

- Monitor progress toward sales goals using KPI tracking
- Compare store-level wages and sales, identifying cost-to-performance imbalances
- Evaluate differences from target, highlighting stores that need support or intervention
- Analyze the relationship between rent and store size, uncovering structural cost drivers
- Use data-driven insights to optimize resource allocation, staffing, and store planning

This solution helps Panda Mart understand not just how much they are selling, but how efficiently they are operating.
