MRP Campaign & Customer Insights

MRP is a growing retail vendor in the food and beverage sector, working to better understand its customers, product performance, and the effectiveness of recent marketing efforts. As a BI developer supporting MRP's market research partner, the goal is to transform raw marketing data into a decision-ready analytics solution that helps the business evaluate its current position and identify opportunities for growth.

MRP recently completed six marketing campaigns and collected a sample of customer and product data. However, the company lacks a consolidated view of how these campaigns performed, who their customers are, and what factors influence purchasing behaviour. This dashboard provides a structured, insight-driven approach to answering these questions and guiding future strategy.

Business Problem

MRP is still developing its understanding of the market and needs a BI tool that can surface insights across four core areas:

1. How are our six recent marketing campaigns performing?
2. How are our products performing across categories and customer groups?
3. Who are our customers and what segments matter most?
4. What is driving campaign performance and buyer decision-making?

The challenge is to unify these questions into a single analytical environment that supports fast, accurate, and actionable decision-making.

Solution Overview

- *Campaign Performance*

This section evaluates the effectiveness of MRP's six recent marketing campaigns. It highlights engagement, conversion, revenue contribution, and comparative performance. The analysis helps identify which campaigns delivered the strongest ROI, which underperformed, and what patterns emerge across channels, timing, and customer segments.

- *Buyer Composition*

This component profiles MRP's customer base, breaking down demographics, purchasing patterns, and behavioural segments. It reveals who the core buyers are, how different groups respond to campaigns, and which segments hold the highest value. This insight supports targeted marketing, product positioning, and customer-centric strategy.

- *Purchase Drivers*

This section uncovers the factors influencing customer decisions—product attributes, pricing, promotions, campaign exposure, and demographic tendencies. By understanding what drives conversions, MRP can refine its marketing approach, optimize product offerings, and improve overall customer engagement.
